

Ideas Presentation

Project II

BY: GROUP 2

INTRODUCTION

Our ideas solve real-life problems, improve efficiency, and enable better support in their own ways.

The main goal is to demonstrate technical skills and build impactful, practical solutions.

PROJECTS IDEAS

Expense Tracker

Lost & Found
System

Productivity App

PROJECT I: Expense Tracker System

Background

With the increasing complexity of daily expenses, individuals often struggle to manage their finances effectively.

This project focuses on developing a system that helps users track and control their spending habits.

Domain Explanation

This project falls under Financial Technology (FinTech) and personal finance management systems, aiming to improve budgeting and financial awareness.

Context of the Problem

Many individuals lack a structured way to monitor their income and expenses, leading to overspending and poor financial planning.

Problem Statement

- Users are unable to track daily expenses efficiently**
- Lack of awareness leads to overspending**

PROJECT I: Expense Tracker System

Affected: Students, working individuals, households

Impact: Financial instability

Objectives

- Track income and expenses accurately
- Categorize spending for better insights
- Provide real-time alerts for budget limits
- Improve financial planning habits

PROJECT I: Expense Tracker System

Methodology

1. Requirement Identification

- Studied existing expense tracking apps
- Identified need for simple UI and real-time alerts

2. Feasibility Study

- Technical: Easy implementation using web technologies
- Operational: User-friendly and accessible
- Economic: Low-cost development

3. High-Level Design

- User inputs transactions → stored in database
- System processes and categorizes data
- Dashboard displays insights and alerts

PROJECT I: Expense Tracker System

Expected Outcome

- A functional system for tracking expenses
- Clear visualization of spending patterns
- Improved financial awareness among users

References

- Existing apps like budgeting tools
- Online documentation and tutorials

Conclusion

The Expense Tracker System helps users take control of their finances by providing structured tracking, insights, and alerts for better decision-making.

PROJECT II: Lost and Found System

Background

Losing personal belongings is common, but recovering them is often difficult due to the absence of a centralized system. This project aims to bridge that gap.

Domain Explanation

This project belongs to Community-based Information Systems and Web-based Platforms that facilitate communication and data sharing.

Context of the Problem

People rely on scattered methods (word of mouth, social media), which are inefficient and time-consuming.

Problem Statement

- No centralized platform to report lost/found items
- Low chances of recovering lost belongings

PROJECT II: Lost and Found System

Affected: General public, students, travelers

Impact: Loss of valuable items, time wastage, frustration

Objectives

- Provide a centralized platform for reporting items
- Enable communication between users
- Improve chances of item recovery
- Ensure verification of ownership

PROJECT II: Lost and Found System

Methodology

1.Requirement Identification

- Studied existing platforms and their limitations
- Identified need for search, communication, and verification

2.Feasibility Study

- Technical: Web-based system is feasible
- Operational: Easy to use for all users
- Economic: Low-cost implementation

3.High-Level Design

- Users post lost/found items
- Data stored and categorized
- Matching system suggests possible matches
- Users communicate and verify ownership

PROJECT II: Lost and Found System

Expected Outcome

- Efficient platform for reporting and finding items
- Faster recovery process
- Improved community interaction

References

- Online platforms and research on community systems
- Web development resources

Conclusion

The Lost and Found System improves the recovery process by centralizing information and enabling efficient communication between users.

PROJECT III: Productivity website

Background

Students often face challenges in managing time and staying focused during study sessions. This project aims to enhance productivity through a structured system.

Domain Explanation

This project falls under Educational Technology (EdTech) and productivity management systems.

Context of the Problem

Lack of proper tools and motivation leads to poor time management and reduced efficiency.

Problem Statement

- **Students struggle with focus and time management**
- **Lack of structured study system**

PROJECT III: Productivity website

Affected: Students and learners

Impact: Low productivity, poor academic performance

Objectives

- Improve focus using structured study techniques
- Provide tools for time management
- Track progress and goals
- Increase motivation through engagement features

PROJECT III: Productivity website

Methodology

1. Requirement Identification

- Analyze common challenges faced by students
- Identify required features including pomodoro timer, note-taking, task management, progress tracking, focus mode and motivation features

2. Feasibility study

- Technical: can be developed using web technologies
- Operational: will be simple and user-friendly
- Economic: cost-effective to develop and maintain

3. High-level design:

- User can log in and access a dashboard
- User will use features like timer, notes, music and tasks
- System will track study progress and streaks
- System will provide reminders and study suggestions

PROJECT III: Productivity website

Expected Outcome

- Improved study efficiency
- Better time management
- Increased motivation and consistency

References

- Existing productivity tools
- Educational research on effective study techniques such as Pomodoro Technique and Active Recall
- Online resources related to student productivity and time management systems

Conclusion

The Productivity website helps students stay organized, focused, and motivated, leading to better academic performance and efficient time use.

Thank you
